Education

MSc in Informatics Engineering <i>Faculdade de Ciências da Universidade de Lisboa</i>	Dec 2024
BSc in Informatics Engineering <i>Faculdade de Ciências da Universidade de Lisboa</i>	Jul 2021

Skills

Languages: C#, Java, JavaScript, TypeScript, HTML, CSS
Technologies and Frameworks: Angular, React, Express.js, Node.js, MongoDB, Three.js, Unity
Tools: Git, Github, Postman, Swagger, Figma, Jira

Projects

saveDforest	🔗 📄
• Co-designed and developed a Unity-based serious game to encourage pro-environmental behavior by fostering empathy towards both people and animals, exploring an interdisciplinary research area scarcely studied. • Built and deployed a MEAN stack web app to embed and support the game, facilitating user access and providing data consistency. • Collaborated with psychologists to integrate validated empathy measurements and ensure that data collected aligned with their research methodologies, thus supporting meaningful analysis. • Structured the architecture of the game and web app with a focus on modularity, enabling feature maintainability and extensibility. • Prepared and coordinated UX evaluation sessions with potential users, and acted on feedback gathered to improve usability, engagement, and overall user experience.	
SÓI ROOM	🔗 📄
• Developed and deployed an interactive 3D virtual space to showcase original artwork and music using React, React Three Fiber, and Three.js. • Built a Cloudflare Worker to retrieve and serve files from R2 object storage, reducing direct exposure of assets while mitigating platform resource consumption. • Optimized 3D assets for the web by baking textures and applying compression techniques, thus minimizing rendering costs and improving performance.
